

The **camel** package (v1.0)

Dafydd Evans and David McConnell

`{evansd8, mcconnelld}@cf.ac.uk`

13th December 2017

The **camel** package provides tools for typesetting lecture notes and provides an interface to the **camel** and **latex-tree** document processing systems.

1 Introduction

This package provides commands for typesetting lecture notes in various formats, and mimics some macros and environments from **exam.cls** for setting questions and answers, including multiple choice and multiple answer questions. The package also provides a standard interface to the **latex-tree** and **camel** python packages.

The most recent version of the package can be found at

<https://github.com/cardiffmaths/texmf/tttx/latex/camel>

2 Options

The following options are available.

proofs	proofs included (default).
noproofs	proofs excluded.
blankoproofs	blank box (for partial handouts).
answers	answers included (default).
noanswers	answers excluded.
blankanswers	blank box (for partial handouts).

3 Macros

<code>\blankon</code>	Switch blank mode on.
<code>\blankoff</code>	Switch blank mode off.
<code>\setproofcolour</code>	Set the proof colour.
<code>\setsolutioncolour</code>	Set the solution colour.

<code>\setanswercolour</code>	Set the answer colour.
<code>\setscalefactor</code>	blah
<code>\setscaleimages</code>	blah

4 Environments

<code>blankbox</code>	The contents of a <code>blankbox</code> environment will be replaced by an empty box whose height to equal the height of the (hidden) contents multiplied by <code>\stretchfactor</code> .
<code>proof</code>	blah
<code>solution</code>	blah
<code>answer</code>	blah

5 Questions and Answers

The package modifies some of the macros and environments found in `exam.cls` for defining different types of question, including multiple choice and multiple answer questions.

<code>questions</code>	A list environment for questions.
<code>\question</code>	Item type for the <code>questions</code> list environment.
<code>parts</code>	A list environment for parts of a question. These can an only be defined within a <code>\question</code> item.
<code>\part</code>	Item type for the <code>parts</code> list environment.
<code>answer</code>	An environment for answers.
<code>\ans</code>	A macro for short answers (wrapper for an <code>answer</code> environment).
